The  
**Collection  
Analysis  
Report**

The Collection Analysis Report is a powerful tool in the Avanta system, allowing the user to examine the frequency and collections for all productions in a practice.

It is the only Avanta report that includes collections referenced by date of service. For example, a user may report on productions for a specific time period, but may include referenced transactions within and/or outside this time period.

The production/collection information may be broken down by up to four levels, including but not limited to *Treating Doctor*, *Primary Insurance*, *Treatment*, *Primary Diagnosis* and *Place of Service*. By default, information is reported in terms of *production amount and frequency*, *collection amount and percentage adjustment*, *amount and percentage* and *balance due and percentage* although further information may also be reported.

The Collection Analysis Report can serve many purposes. For example, the report can  
*(continued to the right)*

*(continued from the left)*

illustrate which procedures comprise the majority of a practice's collections, or to identify which managed care plans are your best and worst performing. For assistance or further information, please call Avanta.

Avanta now provides sales and support for Windows and Macintosh personal computers. For more information, please call Chip at 818-706-9191.

## **POOR PRINT QUALITY? TOO NOISY?**

If your Okidata printer is showing either of these two symptoms, please check if the "ALARM" light is on. If so, the simple solution may be to replace the printer ribbon.

Avanta recommends that high quality OEM ribbons always be used, especially since generic and OEM ribbons are approximately the same cost (\$9 and \$10, respectively). If you have questions about your printer or other hardware, please call Chip at Avanta.
